How To Choose The Right Harness For Your Vehicle

If your car is not among the specific vehicle applications mentioned in this catalog one of our proven universal kits is your best choice. These kits are designed to be used on a wide range of vehicle types. All of our kits come ready to install. We've thought out the problems for you and designed these kits to be truly Painless. The 12 circuit kits will cover the most basic chassis wiring needs.

If your car or truck will have additional electrical accessories such as power windows, door locks or other creature comforts, you will want our 18 circuit harness. Remember that you may want to install these items some time in the future, so now is the time to provide wiring by installing our 18 circuit harness or by using a Painless Cirket Boss™ harness. There is one other consideration that is important: Is your ignition switch on the steering column or in the dash? Use the designated "for GM steering column" for early style "keyed" steering columns from GM. All kits come with more than enough wire and terminals, etc. to do the job. You route and cut to suit your vehicle's needs.
