

14-CIRCUIT REMOTE MOUNT MICRO FUSE HARNESS

#10130 - This Micro Fuse Harness solves a dilemma faced by many custom car builders: where to mount the fuse block. With engine compartments becoming more crowded and underdash space at a premium, there often is not room for a standard size fuse block. The Micro Fuse Harness is the answer.

The key element is the fuse block itself: it measures just 3" x 3 1/2" x 2" yet holds 12 fuses and 2 relays. You can easily tuck it up under the seat or, because of the unique design of this harness, mount it in the trunk. The fuse block is covered to keep it free from dirt and contaminants.

This complete automobile wiring system has been designed with three major groups incorporated into it:

Engine/Headlight Group Includes: high beam, low beam, park, right turn, left turn, electric fan, horn, starter solenoid, battery feed, alternator (output/exciter wire), coil, water temperature, oil pressure and air conditioning compressor.

Dash Group Includes: wires to connect gauges, indicator lights, switches, a/c, heat and radio to their proper sources.

Rear Light Group Includes: taillights, dome light, left and right turn signals, brake lights and fuel sender.

The kit includes an accessory relay and a 10 gauge alternator wire for use with high amperage (over 65 amps) alternators. All wires are color-coded and printed along their entire length for ease of installation. A comprehensive installation manual with charts and diagrams is included.

TRUNK MOUNT CHASSIS HARNESS

#10120 - In many street rods and custom cars there is little or no room to mount the fuse block under the dash, forcing modifications to either the car or the harness.

Our 12-circuit trunk mount wiring harness provides additional wire from the fuse block to the dash and front end, allowing the remote installation of the fuse block in the trunk or behind the rear seat. Like all Painless kits, these fuseblocks come completely pre-wired and terminated for a simple, painless installation. Includes GM column mounted ignition and turn signal plugs.

For 18-circuit applications use #10220 (shown)

NEW - POWERBRAID

See Page 62 for our high tech flexible braided wiring cover.
